

Smartphone application for OTN ?

Hi,

If I want to help, advice or recommend Oracle User who has problems for any Oracle solutions, why should I use my Laptop/Desktop browser on a fixed desk. At any place (house, park, zoo, restaurant, car, bus, on the beach, ...), at any moment I can help who need help and dont forget which we are not have the same time zone.

So why Oracle does not develop a smartphone (Android/Iphone) application (which is light than the smartphone browser) to access to OTN?

Best regards
