

# Functionality on Landing page template to update all active landing pages

---

Hi,

It would be very good to have a functionality on Landing page template so that I can update all existing landing pages. It should run by admins only and requires some Security info that an admin should have.

This way if we have updated the logo or the design of landing page and we run that functionality the active landing pages can be updated.

Right now, if i have to update even a single picture on template then i have to go to all the active landing pages to update it and it takes a lot of time to do that for around 500+ landing pages. And If the landing page is built on template that means I will have to recreate the LP using new template because we can't edit it in the template.

Let's see what others say about this.

Thanks  
Shivangi
