

Picklists for Hidden Form Fields

We place several hidden fields on our forms. But because the values have to be written in, there is the opportunity for manual error when someone misspells a word or chooses a value that is not one of the predefined values for the specific hidden field they have chosen. If we were to have a picklist as an option, then form users can select predefined values for the hidden fields without us administrators having to worry about contacts getting stuck in a program step for having an incorrect value in that field.
