# Redwood Procurement Q&A

Supplier Management

---

**Alan Ng**

Director, Product Management

---

September 15, 2026

# Safe harbor statement

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

# Agenda

- 1 Redwood Adoption
- 2 Feature Highlights
- 3 Roadmap
- 4 Resources
- 5 Live Q&A

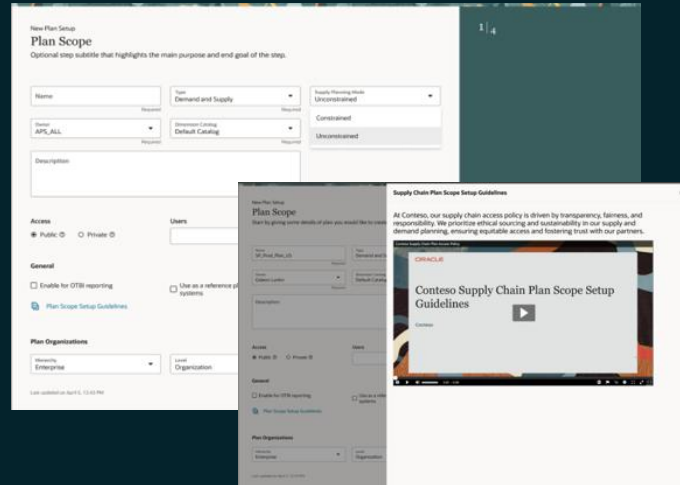

# Redwood Adoption

---

# Leveraging the Redwood Platform

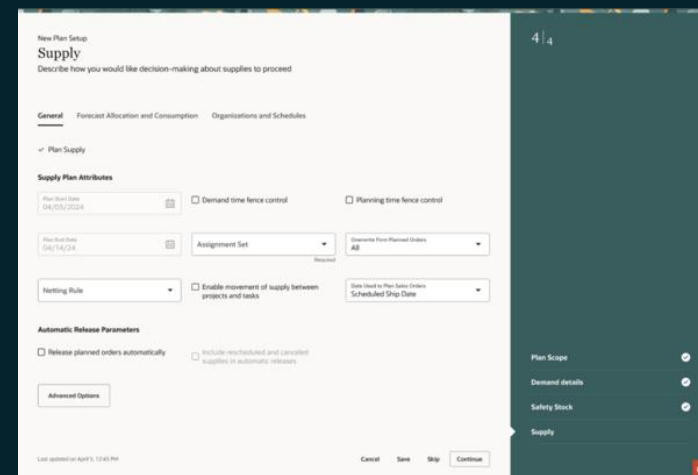

## Customer-Specific Extensibility through Common Components

### Guided Journeys

Support additional customer specific content

### Business Rules

Personalize attributes including support for DFF attributes

# Redwood Adoption Timeline

## The time is NOW

---

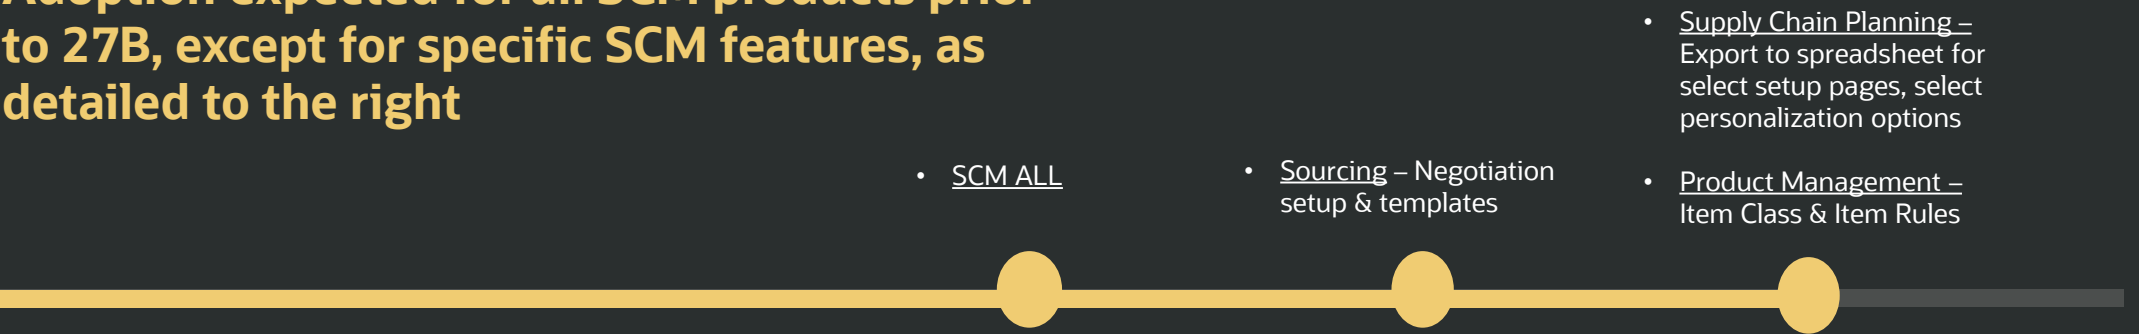

Make a strong, final push to gain the many benefits of Redwood

# SCM Redwood Adoption Plan

**New Deadline – Moved out a quarter. Now by end of 27A/ Prior to 27B**

**Adoption expected for all SCM products prior to 27B, except for specific SCM features, as detailed to the right**

- Any final Redwood SCM Set up pages, not previously delivered, will be available by 27A. (Exceptions noted above)
- For your Redwood migration planning please, reference the **Classic to Redwood Roadmaps** to see if anything noted within is relevant to you. These will exist for a module, if any feature parity items are still planned for delivery. These are available on Cloud Customer connect via the SCM Resource Center / Start here with Redwood link. Drill down via the Product specific Redwood pages listed there.

# SCM Redwood Checklist to Get Started

| #  | Step                                                                                                                                                                      |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | Review the Redwood pages and learning content                                                                                                                             |
| 2  | Confirm that you have completed the general Redwood enablement steps (including Search, permissions)                                                                      |
| 3  | Run the Personalization Helper Tool                                                                                                                                       |
| 4  | Develop approach / plan to migrate based on work to be done and business priorities                                                                                       |
| 5  | Determine staffing of migration work                                                                                                                                      |
| 6  | Enable Redwood on pages via profile options & Opt ins                                                                                                                     |
| 7  | Use Personalization Helper Tool to generate list of existing ADF personalizations and selectively migrate                                                                 |
| 8  | Use VB Express Mode to create personalizations . Leverage VB Forum                                                                                                        |
| 9  | Update internal training / embedded help screenshots and references, as needed                                                                                            |
| 10 | Complete testing <ul style="list-style-type: none"><li>• Individual personalization unit testing</li><li>• Page level testing</li><li>• User Acceptance Testing</li></ul> |
| 11 | Migrate personalizations to production                                                                                                                                    |
| 12 | (with Quarterly update) Download new version of Personalization Helper tool                                                                                               |
| 13 | (with Quarterly update) Review new Redwood pages and features included in the new Quarterly update                                                                        |

# Supplier Portal Home Page

- Redesign and simplify overall user experience to improve navigation and collaboration
- Provide clear and quick access to review notifications
- Broadcast important announcements as supplier news
- Improve adoption and use of Supplier Portal

# AI Agent: Supplier Portal Advisor

- Provide chat-based experience that answers policy, process, and how-to questions
- Leverage documents specific to your business and uploaded in AI Agent Studio
- Link to detailed documentation reference
- Reduce support burden on your organization and improve supplier experience

# Supplier Risk Management

[Custom Connect Event Replay](#)

Use third party providers to validate and enrich data in supplier profile

JP Morgan Chase validates bank account existence, status, and supplier ownership.

Moody's enriches firmographics and expands financial and cyber risk data.

TINCheck by Sovos validates US taxpayer ID against supplier identity.

**Start Here for Redwood Adoption:**

**Check back monthly for Updates - UPDATED July 20 2026**

**Timeline Update:**

- Get started now
- Review Redwood pages and module specific Redwood roadmaps for your end-to-end flows
- Build your adoption roadmap, deploy what makes sense with a target of 100% Redwood adoption prior to 27A
- In case you missed the Redwood Adoption Timeline Customer Connect event, watch the replay today: <https://community.oracle.com/customerconnect/events/607005-scm-redwood-adoption-timeline>

**Key Resources:**

- [SCM Redwood Personalization Helper Tool \(Doc ID 3025798.1\)](#) - Guide for SCM Redwood Personalization Helper Tool - SCM specific utility which will produce a report of a customer's RUI personalizations to assist migrate page personalizations to Redwood.
- **Updated:** [SCM Classic to Redwood pages with Profile Options \(Doc ID 3037517.1\)](#) - For Oracle Fusion Cloud SCM and Procurement applications, the document maps Classic pages to their corresponding Redwood pages, and gives you step-by-step paths to locate the Redwood pages. This document also specifies, where applicable, which profile options or opt-in features you must enable to display the Redwood pages. Additionally, this document specifies whether additional privileges are required for users to access and use each Redwood page.
- [Extending Redwood Applications for HCM and SCM Using Visual Builder Studio](#)
- [Visual Builder Studio for SCM](#)
- Ensure to review the [What's New](#) document each quarter.
- Stay current on [What's New on Readiness App](#)
- [Redwood.oracle.com](#)
- [SCM Redwood Checklist:](#)

[SCM Redwood Checklistv3.pdf](#)  
Uploaded Jul 27, 2026 227.58 KB

- [SCM Redwood FAQ:](#)

[Redwood for SCM Overall.pdf](#)  
Uploaded Jul 20, 2026 365.26 KB

**Questions & Conversations:**

- Post your questions under the appropriate product area category using the categories menu and ensure you tag your post with "Redwood".

# Classic to Redwood Page Mapping

Classic to Redwood Page Mapping

Use the following table to find a mapping of your Classic page name to its corresponding Redwood page name and a navigation path to get there. Also learn whether any profile options need to be enabled or features opted in to for the Redwood page to be available and whether additional privileges are required.

The navigation paths begin with a product group in the carousel on the Oracle home page in the News feed layout and end at the identified Redwood page.

The Additional / Different Privileges Required to Access the Redwood Page column provides the names of additional privileges that your security administrator needs to assign for access to the Redwood pages.

For details about each Redwood page or flow, see the What's New documents for the identified quarterly update for more information.

| Module           | Update | Classic Page Name                                                                                                                                                                                           | Redwood Page Name | Navigation to Redwood Page                                                                       | Setup or Transactional Page | Enabled by Feature Opt in or Profile Option | Opt In Feature Name or Profile Option Code                 | Opt In or Profile Option Delivered On or Off | Default On Release | Additional / Different Privileges Required to Access the Redwood Page                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Nudges Delivered for Redwood Page | Index Name for Data Ingestion   |

Overview

Classic to Redwood Page Mapping

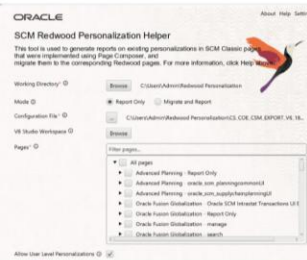

*One of the most sought-after features in our Helper Tool is here.*

## SCM Redwood Personalization Helper Tool now supports Page Composer migration

**New in 26C:** Migrates Page Composer personalizations from Classic pages to Redwood - cutting manual rework and accelerating Redwood adoption.

### Redwood Personalization Helper Tool for SCM

Application that can be used to report and migrate Classic UI (ADF) to Redwood UI (VBS) personalizations

Redwood is the new user experience in Oracle SCM applications. Many pages and flows have been recreated in the Redwood toolset Visual Builder Studio (VBS) to improve the user experience by creating cohesiveness through the application. For more information refer to [Extending SCM Redwood Pages Using Visual Builder Studio \(VBS\)](#).

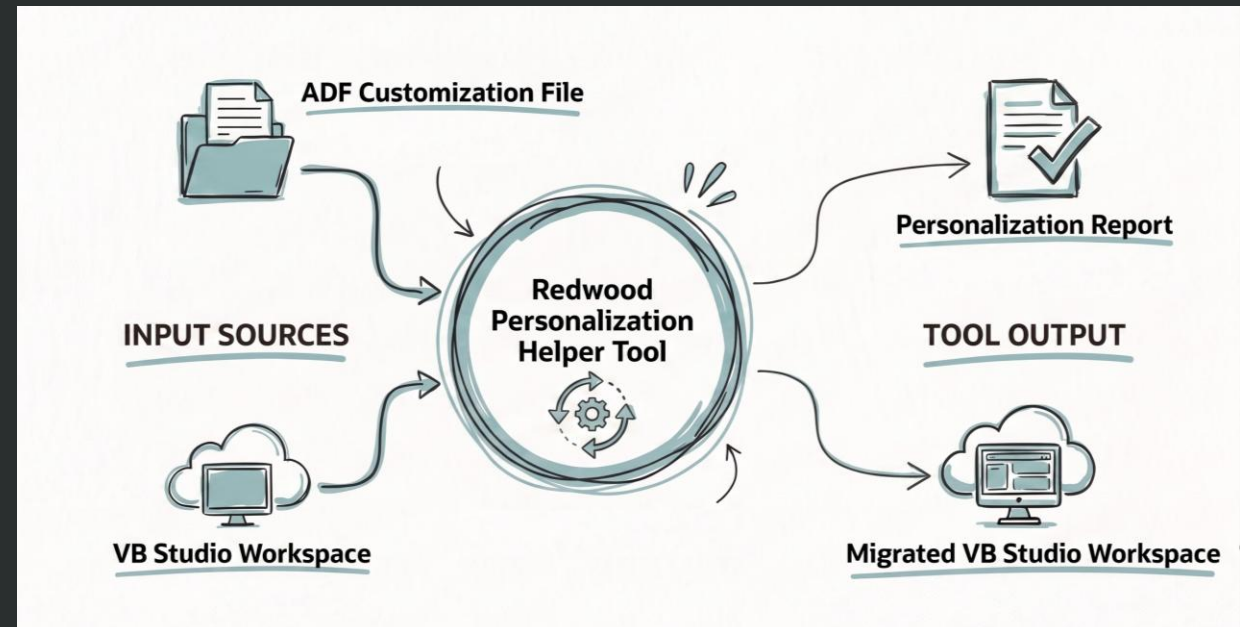

This website provides details about the application that can be used to identify and migrate existing personalizations from ADF pages to their corresponding Redwood User Experience pages.

Please review the [Knowledge document](#) prior to downloading any application as it provides the steps necessary for installation, setup, and running the application.
